Valeo Performance Suite

Valeo Performance Suite, consisting of over 30 unified benchmarking tools, gives a clear and decisive picture of your underlying hardware. Valeo was designed from the ground up to support multithreading, SMP, N-Tier, and cluster/GRID environments.

Valeo tests the major systems components including the CPU, memory, IO, and the communication subsystems. The benchmarks can be individually customized to reflect the actual workload behavior at a customer site.

Valeo Advantages

- ★ Benchmark the HW & OS Primitives to Measure the Raw Performance of the System
- ★ Determine the Capacity Potential of the System
- ★ Identify Potential HW & OS Issues Prior to Putting Systems into Production
- ★ Identify Potential HW & OS Issues After Patches or OS Upgrades
- ★ Cross-Compare Systems from a HW & OS Performability Perspective
- ★ Identify Application Performance Problems Caused Slow/Inefficient OS Calls
- ★ Isolate Potential Performance Problems by Eliminating HW/OS Related Issues
- ★ Simulate the Actual Application Behavior Via Self-contained Benchmarks

Valeo Benefits

Valeo Performance Suite takes all guessing out of the picture, and aids at identifying and resolving HW, OS, or application issues quickly, saving a substantial amount of time, money, and IT resources.

- ★ Valeo Uses a Simple and Easy-To-Use Configuration File
- ★ Find Problems Quickly with Minimum of IT Expenditure
- ★ Shortcut Time of Deployment
- ★ Understand the Financial Impact of Patches and Upgrades
- ★ Understand the Financial Impact of Hardware Upgrades
- ★ Identify the Impact that HW Upgrades have on the Performance
- ★ A 20 Server License Will Pay for Itself in Less than 6 Months¹.

¹Based on conservative estimates for normal servers
